interim resto-
rations

Innovations for
the conventional
dental technology

vivatemp[®]
The first choice for splints and interims

The first choice for splints and interim restorations

The new powder-liquid system is universally suitable for the production of flexible and break-resistant splints of all kinds as well as small interim restorations. The clear thermoelastic material ensures a high level of aesthetics thanks to the almost invisible fastening structures. The patient is enthusiastic about the tension-free and unnoticed wearing of the restoration.

Medical device class IIa

vivatemp[®]
The first choice for splints and interims

Also as
milling discs

Universal powder-liquid system for the production of flexible and break-resistant splints and interim restorations.

Maximum break resistance by thermoelastic flexibility

Tension-free and invisible restorations

“ I am very delighted for the patient thanks to the high comfort level combined with the preservation of the aesthetics due to the clear color. As a user I highly appreciate the versatile handling of vivatemp. The restoration can be relined and expanded at any time and is easy to polish. The connection to acrylic teeth can be easily ensured without using a primer. “

MDT Andreas Schreiber, MoDoDent, Neumünster

Special features

- Tension-free wearing comfort thanks to the memory effect
- High aesthetics due to permanent clarity
- Can be relined / expanded and is easy to polish
- MMA-free
